

Google App Engine Practical Guide

This document explains how to install Google Cloud SDK, create a simple Hello World web application using Python Flask, and run the application locally without billing or deployment.

Step 1: Install Google Cloud SDK

Download and install Google Cloud SDK from:
<https://cloud.google.com/sdk/docs/install>

After installation verify:

```
gcloud version
```

Step 2: Login to Google Cloud

Open Google Cloud SDK Shell.

```
gcloud auth login
```

Step 3: Create a Project

Create a unique Google Cloud project.

```
gcloud projects create aniket-app-2026
```

```
gcloud config set project aniket-app-2026
```

Step 4: Create Application Folder

Create a new folder for your web application.

```
mkdir myapp  
cd myapp
```

Step 5: Install Flask

Install Flask framework using pip.

```
pip install flask
```

Step 6: Create Python File

Create a Python file named main.py.

```
notepad main.py
```

Step 7: Paste Python Code

Paste the following code inside main.py.

```
from flask import Flask

app = Flask(__name__)

@app.route('/')
def home():
    return "Hello World"

if __name__ == '__main__':
    app.run(debug=True)
```

Step 8: Run the Application

Run the Flask application locally.

```
python main.py
```

Step 9: Open Browser

Open the following URL in your browser.

```
http://127.0.0.1:5000
```

Output

The browser will display the following message.

```
Hello World
```

Useful Commands

Command	Purpose
mkdir	Create a new folder
cd	Change directory
pip install flask	Install Flask framework
python main.py	Run Python application
gcloud version	Check SDK version
gcloud auth login	Login to Google account

Note: Running the application locally does not require billing. Billing is only needed when deploying the application to Google App Engine cloud servers.
